

VOTE TO KEEP WATER FLUORIDATION ON DECEMBER 4

- Safe and Effective
- Keeps Strong, Healthy Teeth for Life
- Avoids Pain and Saves Money on Healthcare

Fluoride is a safe way to prevent tooth decay

- A repair kit for teeth
- No reliable evidence of an association with health problems at Australian levels
- 65 years of safe fluoridation in Australia

On December 4 a community poll is taking place in the Port Macquarie-Hastings LGA asking if Council should stop adding fluoride to the water supply.

HOW TO VOTE ON DECEMBER 4

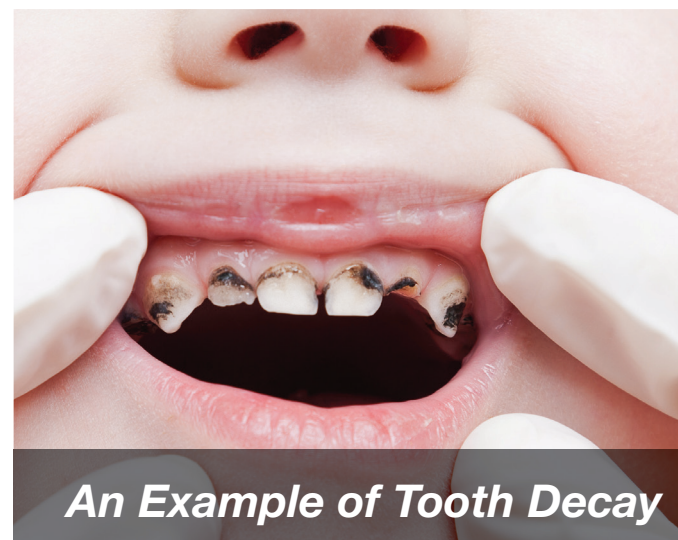

‘Do you want Port Macquarie-Hastings Council to permanently cease adding fluoride (hydrofluorosilicic acid) to the drinking water supply?’

YES

NO

‘NO’ MEANS YOU WOULD PREFER COUNCIL TO KEEP FLUORIDE IN THE WATER SUPPLY.

An Example of Tooth Decay

Water fluoridation is recommended by more than 150 trusted experts around the world

- World Health Organization
- Australian Dental Association
- Australian Medical Association
- National Rural Health Alliance
- Royal Flying Doctor Service
- US Centres for Disease Control and Prevention

“Water fluoridation reduces tooth decay in children, adolescents and adults”

National Health and Medical Research Council
